822 Heat and Air Expands Commercial and Residential HVAC Installation and Repair Services

September 15, 2026

Benbrook, TX - September 15, 2026 -
822 Heat and Air has expanded its heating and air conditioning offerings to include a broader range of commercial HVAC installation and AC repair services across the Greater DFW Metroplex and surrounding suburbs. The expansion allows the company to serve both large-scale commercial buildings and residential homes with complete system installations, repairs, and ongoing maintenance.

As a licensed contractor specializing in full HVAC installation, 822 Heat and Air now brings expanded installation capacity to commercial clients while continuing to support homeowners with heating and cooling needs throughout the year. The company serves communities including Crowley, Burleson, Benbrook, Granbury, Joshua, Godley, Cleburne, Alvarado, Fort Worth, Arlington, and Dallas.

The expanded services address a wide array of common issues that property owners face, including uneven heating or cooling, rising energy bills, weak airflow, unresponsive thermostats, and aging equipment. Technicians provide a diagnosis before any repair begins and work on all major brands and system types.

For commercial customers, the company offers personalized installation, repair, and maintenance solutions designed to improve indoor environments in larger facilities.

"The decision to broaden the installation and repair services reflects the growing demand for reliable heating and cooling across the region," said David of 822 Heat and Air. "Property owners want a single contractor who can handle both the initial installation and the long-term maintenance that keeps a system running efficiently. Expanding these services allows the company to meet that need for commercial and residential clients alike."

The company's residential HVAC work is tailored to the specific heating and cooling requirements of individual homes, covering new system installations, repairs of existing equipment, and improvements to indoor air quality. Seasonal maintenance remains a central part of the offering, with tune-ups recommended for air conditioners in the spring and furnaces or heat pumps in the fall. Each maintenance visit includes a multi-point inspection intended to identify potential problems before they lead to breakdowns.

All work is performed by licensed, insured, and EPA-certified technicians. The company also provides ductwork installation, repair, and maintenance, which supports efficient air distribution in both commercial and residential settings. Financing options are available for replacements and installations, subject to credit approval and offer eligibility.

"Comfort and efficiency go hand in hand," David added. "Whether the project involves a ground-up installation in a commercial building or a routine tune-up in a family home, the goal is the same: dependable performance and transparent service from start to finish."

The expansion arrives as demand for heating and cooling services continues to rise across North Texas, where seasonal temperature swings place significant strain on residential HVAC systems and commercial equipment alike. By increasing installation and repair capacity, 822 Heat and Air aims to reduce wait times and provide prompt response for property owners throughout its service area.

822 Heat and Air is a commercial and residential heating and air conditioning contractor serving the Greater DFW Metroplex and its suburbs. The company specializes in complete HVAC installation, repairs, system replacements, ductwork, and seasonal maintenance, with a focus on honest pricing and year-round comfort for its clients.
