Northwest Plumbing Heating & AC Announces Enhanced Central Air Inspection Protocols for Year-Round System Maintenance

April 23, 2026

DAVENPORT, Iowa - April 23, 2026 -
Northwest Plumbing Heating & AC has announced the implementation of enhanced diagnostic protocols for central air conditioning systems, expanding their comprehensive inspection services to address both heating and cooling equipment throughout the year. The Iowa-based company, which has served the Quad Cities region since 1923, has developed new inspection procedures that identify potential system failures before they result in emergency repairs.

The enhanced inspection protocols come as the company responds to increased demand for preventative maintenance services across all HVAC systems. The expanded diagnostic procedures now include detailed evaluations of refrigerant levels, electrical connections, condensate drainage systems, and air handler components, providing homeowners with comprehensive system assessments regardless of the season.

"Our technicians have observed that many heating and cooling emergencies can be prevented through

proper inspection and maintenance," said Bill Durand, Service Manager at Northwest Plumbing Heating & AC. "By implementing these enhanced protocols, we're helping homeowners avoid unexpected system failures and extend the lifespan of their equipment, whether it's their furnace in winter or air conditioning in summer."

The company's Service Partner Agreements, starting at $99 annually for heating systems and $119.40 for plumbing coverage, now incorporate the enhanced inspection procedures. These preventative maintenance plans include scheduled maintenance visits, priority service scheduling, and waived after-hours fees for emergency situations. The comprehensive approach addresses furnace systems, boilers, geothermal heating, high-efficiency equipment, water heater services, drain cleaning, and sump pump installations.

Northwest Plumbing Heating & AC maintains an active presence on Twitter and other social media platforms, where they share seasonal maintenance tips and service updates with customers. The company uses these channels to educate homeowners about the importance of regular system inspections and preventative maintenance throughout the year.

The enhanced inspection services complement the company's existing 24-hour emergency service availability for both plumbing and heating needs. Technicians have experience with all types of heating and cooling systems, including high-efficiency units, geothermal systems, and traditional equipment. The company also offers financing options through GreenSky to make system replacements and major repairs more accessible to homeowners.

Recent industry data has shown that regular system inspections can reduce emergency service calls by up to 40 percent and extend equipment life by several years. This news article highlights how Northwest Plumbing Heating & AC has responded to these findings by modernizing their inspection procedures and diagnostic capabilities.

Northwest Plumbing Heating & AC has been providing plumbing, heating, and air conditioning services to the Quad Cities area for over a century. The locally owned company offers comprehensive residential services including installation, repair, and maintenance of all major home comfort systems. Their team of experienced technicians provides both scheduled maintenance and emergency services to ensure residents have reliable heating, cooling, and plumbing systems year-round.
